

Magnum V I Vacuum Test Kit

The Magnum V I Vacuum Test Kit was developed to enable contractors to test single wall sumps and spill buckets for integrity during construction. It is also used for testing and locating leaks in existing installations. The Kit has built in safety features and is easy to operate.

FEATURES & BENEFITS

- Test takes a fraction of the time required to perform a hydrostatic test
- Eliminates the costs of disposing of waste water
- Detects leaks as small as .008 of an inch
- Can test sumps up to eight feet in depth
- Approximate test time is 3-7 minutes
- Increased profits for testing companies
- Easy to operate and user friendly
- Compact and lightweight
- Built in safety features
